```php
<?php

    function Average (array $value){

        $sum = 0;

        for ($i = 0 ; $i < count ($value) ; $i++){

            $sum += $value[$i];

        }

        return ("<h3>".$sum/count($value)."</h3>");

    }

    function Ask (string $sentence){
        return ($sentence);
    }

    // echo Average (2,4,2,4);
    // Fatal error: Uncaught TypeError: Argument 1 passed to Average() must be of the type array, in
    echo Average ([2,4,5,2,1]);

    echo var_dump (Ask (123/2));
    // Berubah menjadi string....
?>
```
