```php
<?php
    class hello {

    }

    $say = new hello ();
    // echo $say;
    // Fatal error: Uncaught Error: Object of class hello could not be converted to string

    class halo {

        public function __toString (){
            return "<h3>saya berasal dari class ".__CLASS__." dan method ".__METHOD__."</h3>";
        }

    }
    $bicara = new halo ();
    echo $bicara->__toString();

?>
```
