```php
<?php
    //Contoh I
    class Mom {
        public function Hello(){
            return "Hello aku mom";
        }
    }

    class Daughter extends Mom {
        public function Hello(){
            return "<b>Hello aku daughter turunan mom</b>";
        }

        public function Hello01(){
            return parent::Hello();
        }
    }
    $object = new Daughter;
    echo "<div class=guess href=#>". $object->Hello() ."</div>";
    echo "<div class=guess href=#>". $object->Hello01() ."</div>";
?>
```
